Prior art

Reference is made to the following documents:

D1:US 6090044 A

D2:WO 9222245 A1

Document D1 discloses an apparatus and a method for recording and analyzing an activity pattern of a person with the purpose to detect the state of health of, or physical change in, a person. The apparatus comprises means for collecting and registering data relating to the movements of a person, for example with the help of a camera, which data is transferred to a computer where the data is stored for further processing. With the help of suitable software (algorithms) in the computer, the data can be analyzed and certain parameters can be extracted from which some features can be derived. By using neural networks, which have been trained to recognize certain features in the dataset with help of earlier stored data, features of physical disorders or other medical disorders can be recognized. (See the whole document.)

Document D2 discloses a portable apparatus for recording and registering the physical activity of a person. The apparatus can be fastened to an arm for example and is used to collect and store data of the physical activity of a person, which data is transferred to a separate computer, which computer analyzes the data so that features or occurrence of disorders can be detected.
